Hybrid Vegetable Seeds

(Pole Beans)

NZ

Pods are slender semi round, Stringless light green in colour, length : 16 - 18 cms & First picking start from 40 - 45 days, Tolerance to fusarium wilt, Bean Common Mosaic virus

(Pole Beans)

CLASSIC NZ

Pods are slender semi round, Stringless light green in colour (lustrous), length : 19 - 20cms &, First picking start from 45 - 40 days, Tolerance to Bean Common Mosaic virus, halo blight

(Pole Beans)

NZ SUPER KING

Pods are slender semi round, Stringless light green in colour (lustrous), length : 20 - 22cms & First picking start from 40 - 45 days, Tolerance to fusarium wilt, Bean Common Mosaic virus

(Pole Beans)

CHAMATHKAR

Pods are slender semi round, Stringless, light green (lustrous) length : 20 - 22 cms & First picking start from 40 - 45 days, Tolerance to fusarium wilt, Bean Common Mosaic virus, Rust, Halo Blight

(Pole Beans)

US - 2

Excellent vigorous dark leaf pink stem with pink flower & pink vein (6-7feet), Pods are slender 16 - 17cms long light green (lustrous) in colour, Pods are Av. weight 8 - 10gms, High yielding black seeded

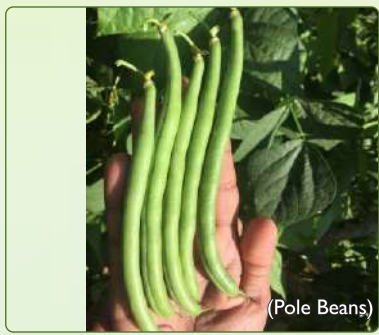

(Pole Beans)

RANNA

Plants are creeper, Pods are light green Pod length 17-18cm, Good adoptability

(Pole Beans)

BELLI

Fruits are green, stringless, Average fruit length 12-13 cm, Maturity 45 - 50 days after sowing Very good adaptability for high temperature Disease tolerance

(Pole Beans)

MARUTHI

Plants are creeper, Pods are light green Pod length 17-18cm, Good adaptability

(Bush Beans)

HARIKOT

Plants are bushy with erect leaves. Pods are stringless dark green, Maturation 40-45 days after sowing, Good adaptability

(Bush Beans)

MALGUDI

Pods are dark green, lustrous straight, Pods are 11-12cms long & Pods are Av. weight 7-8gms, stringless round shape first picking start from 40 - 45 days, Resistant to Bean Common Mosaic Virus, Halo Blight

(Bush Beans)

NAVELI

Pods are slender straight stringless, light green semi round Pods are 16 - 17cms long & first picking start from 40 - 45 days, Tolerance to fusarium wilt, Bean Common Mosaic & Rust

(Bush Beans)

ANUP

Plants are vigorous, dark green lustrous leaves, Pods are dark green glossy, stringless, round, length : 12 - 14cms & Av. Weight 8 - 9gms thick , First picking start from 40 - 45 days, Tolerance to fusarium wilt, Bean Common Mosaic virus, Rust Halo Blight & Curly Top virus

(Bush Beans)

MALNAD (IA-101)

Plants are bushy, Pods are flat straight with string Pods are light green with red shade, Good adaptability

(Bush Beans)

CLASSIC MALGUDI

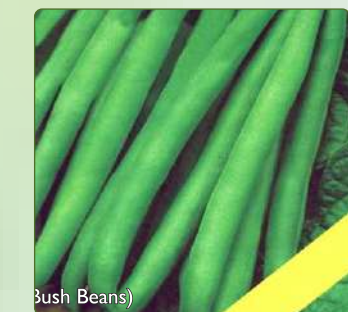

Attractive, high quality, high yield, vigorous, dwarf variety White seed with small size. Erect thick green leaves with more number of branches. Pods are dark green, lustrous straight, stringless, round shape with 12-13cms long First picking start from 45-50 days after sowing

(Bush Beans)

BRAHMI

Vigorous dark green lustrous leaves, Pods are dark green straight string round shape, Pods are 10 - 12cms long & Av. weight 8 - 9gms thick flesh, First picking start from 40 - 45 days after sowing, Recommended for summer & rainy, Tolerance to Pod Rot, Rust, Yellow Mosaic virus

(Bush Beans)

S - 9

Bushy very vigorous green, leaves thick branching variety pods are straight slender 16-17cms long, Av. pods weight 8-10gms, first picking start from 40-45 days after sowing partial string, light green, flat shape, high yielding dark brown colour seed

(Bush Beans)

NEELADRI

vigorous purple stem, vein & leaf colour lustrous variety pods are 16-17cms long, Av. weight 7-8 gms, pods are purple colour, straight stringless, round shape, first picking start from 40-45 days after sowing, mature seed colour slightly purple high yielding

(Bush Beans)

AFA 10

Bushy vigorous light green lustrous leaves, pods are 16-18cms long, Av. Pods weight 7-8 gms, pods are light green string flat shape, first picking start from 40-45 days after sowing, high yielding, mature seed brown in colour tolerance to angular leaf spot

FI HYBRID - PRAGATHI

Attractive green fruits on maturity fruits are turning to bright red, Fruits are 9 - 10cms long, 1.1 - 1.2cms dia. Av. weight 6 - 8gms, Suitable for green & dry purpose, First picking start from 60 - 65 day

FI Hybrid - 664

Bushy spreading type plant with excellent plant vigorous
Fruits are dark green in colour turning to deep red on maturity
Fruits are 12 - 14cms long, 1.2 - 1.3cms dia & Av. weight 8 - 9gms
First picking start from 60 - 65 days after transplanting

FI Hybrid - TEJA

Outstanding tall hybrid for dual purpose, Fruits are dark green turn to dark red, Fruits are 7-8cms long, 0.4-0.6cms dia & Av. weight 3 - 4gms, High pungency (powder colour red), First picking start from 70-75 days after transplanting

FI Hybrid - 781

Outstanding hybrid for dry purpose. Vigorous plant, tall spreading, strong root. Fruits turn dark green to bright red colour after drying. Fruits 10-11cm long and 1-1.1cm in diameter. Very productive & high yielding hybrid. Tolerance to foliar disease & bacterial wilt tolerance.

FI HYBRID - DEEPA

Tall vigorous erect type medium maturing variety, Fruits are dark green colour turning to deep red on maturity
Fruits are 12 - 14cms long, 1.8 - 2cms dia thick, Av. weight 20 - 22 gms (Fresh) mild pungency, First picking start from 65 - 70 days

FI Hybrid - ASHOKA WONDER

Plants are tall vigorous spreading type, Fruits are dark green in colour turning to attractive red on maturity Fruits length 15-16cm with 1-1.5cm thickness Av. Weight 16-18gram (fresh), Medium pungency

FI Hybrid - KRISHNA - 289

Excellent green chilli, fresh market. Vigorous, profuse branching erect nature. Fruits attractive light green smooth skin pungent. Fruits 14-15 cm long & 0.9 cm in diameter. Prolific bearing consisting high yielding hybrid. Excellent tolerance to foliar disease. Good adaptability.

FI Hybrid - 210

An outstanding green chilli, fresh market hybrid vigorous, spreading plant habit. Fruits are attractive light green, lustrous smooth skin pungent. Fruits 16-18cm long & 1-1.3 cm in diameter. Prolific bearing high yielding hybrid. Good tolerance to foliar disease. Good adaptability.

FI Hybrid - OMEGA

Spreading habit, vigorous plant, Fruits are attractive light green smooth skin. Fruits 10-12cm long, 1cm in diameter. Prolific bearing, high yielder hybrid. Tolerance to major foliar disease. Good adaptability, suitable for long transportation.

FI Hybrid - SITA 250

Plants are tall vigorous, spreading type, Fruits are green slender, for fresh market, Fruits are 12-13cms long 1.3-1.4cms dia & Av. weight 7-8gm, Medium pungency First picking start from 60-65 days after transplanting

FI Hybrid - AS-02

Plants are spreading, vigorous, moderate foliage Fruits are light green, lustrous, Fruits are 21-22 Cm long, Pungent, good adaptability, high yielder For fresh market

FI HYBRID - ASHOKA SHREE

Plants are vigorous, Fruits are light green colour surface slightly wrinkle, Fruits are 14 - 16cms long 0.8 - 0.9cms dia, Av. weight 6 - 7 gms pungent First picking start from 60 - 65 days

YELLOW XYLO

Excellent sturdy vigorous hybrid
 Fruits are 3-4 lobed blocky, thick wall green
 Fruits are 6 - 7cms, 8 - 9cms dia, thick
 Av. weight 150 - 160gms
 Fruits are mature colour dark green to yellow
 First picking start from 50 - 55 days after transplanting
 Mild pungency, acceptable aroma
 Suitable for long transportation

FI Hybrid - 413

Plants are bushy with much branching, Fruit surface smooth green lustrous, Average fruit length 12-13 cm Can be used for fresh and dry purpose

FI Hybrid - RADO

Profusely branching, spreading vigorous hybrid. Fruits attractive (lustrous) dark green wrinkle skin. Fruits 15-16cm long 0.6cm in diameter. Prolific bearing high yielder, Tolerance to foliar disease. Good adaptability.

FI Hybrid - VYBHAV (6530)

Plant are vigorous spreading habit, Outstanding fresh market hybrid, Fruits colour light green slightly wrinkle at stalked, Fruit 10-12cm long 0.8-0.9cm in diameter High yielder, good adaptability, Tolerance to major foliar diseases

FI Hybrid - AASMAN

Plants are vigorous, fruits are dark green in colour surface slightly wrinkle, fruits are 6-7cms long upright, high pungency, first picking start from 60-65 days after transplanting, tolerance to major and disease

JWALA HYBRID

Plants are vigorous, bushy, fruits are light green in colour, surface slightly wrinkle, fruits are 14-16cms long, pungent, high yielding, Jwala type

FI Hybrid - AS 023

Plants are spreading, vigorous, moderate Foliage Fruits are green, lustrous, Fruits are 16-17 cm long Mild pungent, good adaptability, high yielder For fresh market

FI Hybrid - BANGALORE SUPER

Plants are vigorous spreading type, excellent early maturing hybrid, Fruits are slender green in colour turning to attractive red on maturity, Fruits length 20-22cm, with 8-1.2cm thickness, Av. Weight 10gram (fresh) Pungent, First harvest start from 60-65days from transplanting

FI Hybrid - NISHA

Plants are vigorous, excellent early maturing hybrid Fruits are Parrot green in colour Fruits are 22 - 24cms long & width 2.2 - 2.4cms dia Av. weight 20 - 25gms (fresh) mild pungency First picking start from 60 - 65 days after transplanting

FI Hybrid - CALIFORNIA WONDER

Tall & vigorous popular variety, Fruits are 3-4 lobed Fruits are rich green shiny, Fruits are 8-9cms, 6-7 dia Av. weight 120-140gms, First picking start from 50-55 days after transplanting, Mild pungency suitable for shipping, widely accepted at local market

FI HYBRID - AS 95

Determinate, vigorous, high yielding (PKM-I Type) Fruits are flat round & Av. weight 70 - 80gms First harvest starts from 55 - 60 days, Tolerance to Partial Bacterial & Fusarium wilt

FI Hybrid - SONAM

Determinate, tall, moderate dark green leaves. Fruits are round with green shoulder. Fruits Avg weight 85-90g First picking 55-60 days after transplanting. Excellent widely high yielder, good adaptability, Acidic taste acceptable fresh market hybrid. Tolerance to leaf curl virus.

FI Hybrid - 204

Semi determinate, vigorous Fruits are flat round, firm Av. weight 80-90gms, First harvest starts from 60-65 days after transplanting, Sour taste, desi type Good for fresh market, Tolerance to TYLCV Early Blight & Fruit Rot

FI Hybrid - RAJALAKSHMI

Determinate, vigorous, high yielding, Fruits are flat round firm & Av. weight 70-80g. First harvest starts from 50-55 days after transplanting. Good for fresh market Tolerance to TYLCV & Fusarium wilt, Recommended for all season

FI Hybrid - 1140

Indeterminate, vigorous, high yielding, Fruits are round firm Av. weight 85-95gms, First harvest starts from 60-65 days after transplanting, Good for fresh market, Tolerance to TYLCV Early Blight & Fruit Rot Recommended for all season

FI Hybrid - GANESH

Determinate tall, moderate foliage. Fruits are round firm. Fruits Avg weight 100-105g, First picking 55-60 days after transplanting. Good yielder, good adaptability. Suitable for long distance, transporting. Heat tolerance.

FI Hybrid - 2039

Semi Determinate, (tall) high yielding, Fruits are slightly square round, firm & Av. weight 90 - 100gms, First harvest starts from 50 - 60 days, Tolerance to TYLCV & Bacterial wilt

FI Hybrid - RATHNA

Determine vigorous. Fruit oval square firm ripe colour deep red. Fruit weight Avg 90-100g Fruit picking after transplanting 60-65 days. High yielder, good adaptability. Tolerance to leaf curl virus & fusarium wilt.

FI Hybrid - AS 685

Vigorous semi determinate, moderate foliage. Fruits are square round, firm. Fruit weight Avg 110-115 g First picking 60-65 days after transplanting. Good adaptability, high yielder. Tolerance to leaf curl virus, TYLCV-2, Fusarium wilts

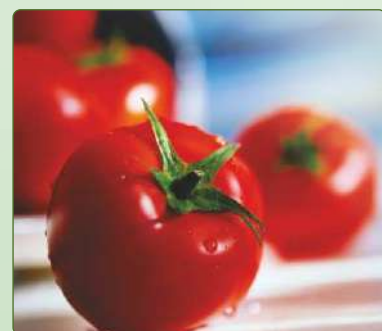

FI HYBRID - 1005

Semi determinate, moderate foliage, fruits are square round firm & Av. weight 100 - 110 gms, first harvest starts from 60 - 65 days, tolerance to TYLCV & bacterial wilt

FI Hybrid - DIKSHITH

Semi determinate moderate foliage, vigorous. Fruits are oval square, firm. Fruits weight Avg 105-110 g. First picking 60-65 days after transplant Excellent yielder good adaptability. Resistance to TYLCV -2, fusarium wilt.

FI HYBRID - RED STONE

Indeterminate, vigorous, high yielding, Fruits are round, firm & Av. weight 100 - 110gms, First harvest starts from 60 - 65 days, Tolerance to TYLCV & Fusarium wilt

Tomato - 1005

FI Hybrid - PRIYA

Semi determinate vigorous, normal leaf. Fruits are oval round, deep red colour, and firm. Fruit weight Avg 100-105 gram. First picking starts 60-65 days after transplanting. Good adaptability, high yielder Tolerance to leaf curl virus, fusarium wilt.

FI Hybrid - HIMAGIRI

Indeterminate, vigorous, high yielding, high yielding, fruits are round, firm & Av. weight 100-110gms, first harvest starts from 60-65 days, after transplanting, tolerance to TYLCV & fusarium wilt, good for long distance shipping recommended for all season

FI Hybrid - ANURADHA

Semi determinate, high yielding, fruits are square round firm & Av. weight 90-100gms, first harvest starts from 50-60 days after transplanting, tolerance to TYLCV & leaf spot, good for long distance shipping, Recommended for rabi & summer

FI Hybrid - RUCHIKAR

Determinate, vigorous & high yielding (PKM-I Type) fruits are flat round, & Av. weight 70-80gms, first harvest starts from 55-60 days after transplanting, sour taste & suitable for fresh market, tolerance to partial bacterial & fusarium wilt

S - 22 HYBRID

Determinate, fruits are round & Av. weight 75-80gms first harvest starts from 55-60 days after transplanting locally prepare, disease free, good for fresh market

FI Hybrid - 189

Semi determinate, vigorous, high yielding, fruits are flat round, firm & AV. weight 80-90gms, prominent green shoulder acidic taste, first harvest starts from 60-65 days after transplanting, good for fresh market, tolerance to TYLCV & fusarium wilt

FI HYBRID - AKASH

Plants are vigorous, sturdy vine Fruits are round thick netted surface& Flesh colour deep orange, aromatic Av. weight 1 - 1.5kgs, First harvest starts from 70-75 days

FI HYBRID - FULL MOON

Early maturation melon, 35 days harvest after flowering, plant vigorous, yellow rind with light orange-red flesh Taste excellent, sugar content 15-16%, Fruit Weight 1.5-2.0kg, Good for long transportation

FI Hybrid - KARISHMA

Vigorous Growth Spreading Hybrid, Fruits are Oblong Medium Firm , Average Fruit Weight 70-80 gm, Long 10-12 cm, First Harvest start after 60-65 Days

FI HYBRID - AFA 306

A vigorous, strong vine hybrid, Fruits are oval round light green, dark stripe Av. weight 10- 12kgs First harvest starts from 85 - 90 days, Tolerance to anthracnos downey mildew

FI Hybrid - SANTRO

Strong plant, Early maturity, Fruits are oval Av. weight 3.5 - 4kgs, Dark green rind with unobvious stripes, Sugar content is about 13% TSS, Good form storage and shipment, Suitable for summer & high yield.

FI HYBRID - SAMSUNG

Early maturity, Fruits are oval, Dark green with red flesh Av. weight 3 - 4kgs, First harvest starts from 60 - 65 days Sugar content is about 13% TSS

FI HYBRID - A1

Early maturing outstanding, winter season hybrid Curds are clear white, dome shape, Av. curd weight 1 - 1.25kgs, Maturity 60 - 65 days

FI Hybrid - WHITE CORSA

Early maturing our standing, summer variety, curds are white 675-725 gms, curds are solid fine beads, maturity 45-50 days from transplanting, suitable for warm season up to 38°C - 40°C

FI Hybrid - A 60 (Sahyadri)

Early maturing our standing, winter season hybrid, curds are clear white, dome shape, Av. curd weight 1-1.5kgs curds are solid fine bead's good holding ability, maturity 65-70 days from transplanting, recommended for winter

FI HYBRID - BULLET TRAIN

Early maturing outstanding hybrid, Heads are slightly oval round, blueish green, Av. head weight 1.25 - 1.5kgs, Head are Very compact, excellent field hold capacity, Maturity 60 - 65 days

FI Hybrid - BALARAM

Late maturing outstanding hybrid, Heads are flat blueish green Av. head weight 3 - 3.5 kgs. Very excellent field hold capacity very compact, Maturity 85 - 95 days from transplanting Resistance to black rot & Fusarium rot, Suitable for all season

FI HYBRID - DESCENT

Early maturing outstanding hybrid, Heads are round blueish green, Av. head weight 1.25 - 1.5kgs Head are compact, excellent field hold capacity Maturity 60 - 65 days

FI HYBRID - LAILA

Vigorous light green, pink midrib, Roots are round uniform smooth shoulder with very small, Taproot crimson red colour, Av. fruits weight 150 – 200gms Tolerance to Anthracnos

RED MAN

Vigorous, dark green broad leaves pink midrib, root are slightly oblong round small tap root smooth, roots Av. weight 250-300gms, good adaptability summer season suitable for long distance

BRG - I

Plants are bushy with much branching, more vigorous, Plants are 3.5-4 feet height, Pods flat with green pigmentation, High yielding variety with 4-5 seeds per pod, Good adaptability

FI HYBRID - RUBY

Plants are vigorous, thick green lustrous leaves sturdy vine, fruits are cylindrical, smooth surface light green Av. fruits length 26-28cms, dia 12 - 14cms First harvest starts from 60 - 65 days

I.FI HYBRID - PINKY

Plants are vigorous, thick green lustrous leaves sturdy vine fruits are cylindrical, green dense hair on surface, fruits length 20-22cms, dia 11-13cms, flesh white, soft seeds slightly dramatic, maturation 60-65 days after sowing Resistance to rust

FI HYBRID - TWINKLE

Plants are vigorous, thick green lustrous leaves sturdy vine fruits are cylindrical, smooth surface light green colour fruits length 26-28cms, dia 12-14cms, flesh white, soft seeds slightly dramatic, maturation 60-65 days after sowing Resistance to rust

N - 53

Deep red globular shape, medium size bulbs Av. weight 85- 90gms Maturity from 95 - 100 days

GANGA

Bulbs are red, Bulbs weight average 80-90gm Good pungency

AS - 345

Mature in 95 - 100 days, Globe Shape, light red medium size bulbs, Weight about 90 - 100gms

ROYAL (BUNCH)

Bulbs are red, Bulbs weight average 80-90gm Good pungency

AS - LIGHT RED

Mature in 95-100 days, Flat round shape, red medium size bulbs, weight about 90-100gms A widely adapted kharif onion, very good keeping quality

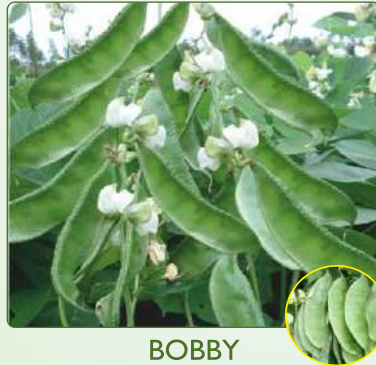

PUNE PURSUNGI

Round red medium size bulbs, weight about 70-80gsm, locally prepared, medium keeping quality

ASHOKA HA - 04

Plants are bushy, vigorous, pods are concave more productive wide adaptability, Locally preferred

BOBBY

Plants are Bushy, vigorous, dark green leaves, Pods are broad straight light green colour, Length 6 - 7cms 3-35cms dia, Maturity for harvest 42 - 45 days

DIANA

Plants are creeper, vigorous, pods are slightly straight Green lustrous, uniform high yielding, Maturity for harvest 50 - 55 days, More productive wide adaptability

ASHOKA HA - 03

Bushy Plant Slightly green leaves Pod light green concave, 40 to 45 days crop

ALOK (Pole)

Plants are creeper, vigorous, dark green leaves, pods are are broad straight concave, Length 8-9cms dia, Maturity harvest 50 - 55 days, More productive wide adaptability

BALI (Pole)

Plants are creeper, vigorous, pods are slightly straight green lustrous, uniform high yielding, maturity for harvest 50-55 days more productive wide adaptability

FI HYBRID - REX

Leaves are light green, Flattish round knobs with stalk slightly pigmented, Average knob weight 60-65g Maturation starts from 45-50 days after sowing Good adaptable and high yielder

FI HYBRID - RAINA

Light green erect leaves, Knob shape is round with slightly pigmented stalk, Average knob weight 60-65gm Maturation starts from 45-50days after sowing Good adaptable and high yielder

SUPER EARLY - YL35

Vigorous high yielding variety, Pods are light green crispy, 50-55 long & straight, First harvest starts from 50 - 60 days

AFA - 10

Medium maturing, vigorous growth habit borne on few Pods are green 8cms long, filled with 9-10 seeds/pods First harvest starts from 50 - 55 days

AFA - 15

Late maturing, vigorous growth habit borne in double on few, lower nodes & single on the other, Av. plant height 50-55cms, pods are dark green 10cms long incurved towards surface at distal, end which is pointed well filled with 9-10 seeds/pods first picking start 50-60 days first picking start 50-60 days after transplanting

SUPER EARLY - 24

Vigorous high yielding variety, First picking start from 50-55 days after sowing, Pods are dark green crispy 50-60cms long & straight, Seeds are black colour

FI HYBRID - IVORY WHITE

Leaves are light green with dorsal and ventral surface thick hairs, Roots are elongated white colour, slightly taper tip end, Avg root length 30-35cm and Avg. root dia 3.5-4cm, Maturity starts from 35-40days after sowing Aromatic pungent

FI HYBRID - PEARL

Leaves are green with light hairs, Roots are white color, slightly taper tip end, Avg root length 24-25cm and Avg. root dia 3-3.5cm, Maturity starts from 35-40days after sowing, Acceptable aromatic

FI HYBRID - FIVE STAR

Smooth leaves, Roots are white with pointed tips Average root length 18-20cm, Pungent aromatic

RADISH 38 DAYS

Early vigorous straight root in shape Av. roots are 18 - 20cms long, 4-5cms in dia Av. weight 200-250gms firm texture

FI HYBRID - KOREA KING

Smooth leaves, Roots are white cylindrical with pointed tips, Average root length 18-20cm and Dia 4-4.5 cm, Aromatic and good pungency

PUSA CHETKHI LONG

Early vigorous straight root in shape, Av. Root are 20 - 25 cms long, 5.5-6cms in dia & Av. weight 250-300gms firm texture, First harvest starts from 45-50 days after sowing, Locally widely accepted

ASHOKA SUPER KURODA

Excellent uniform & high yield variety, Vigorous dark green leaves, Root is 18-20cms length, 4-5cms dia weight 200g, Root are very smooth skin, orange reddish in colour, Suitable for long transportation, flesh as well processing purpose, Mature 90-100 days after sowing

FI HYBRID - 999

Slightly conical, Uniform root formation, Deep Orange color root, Root length 18-20cm, Dia 4-5cm Fruit weight 100-110gm

EARLY NANTES

Vigorous dark green leaves high yielding uniform Root is 18-22cms length, 3.4-4.5cms dia & Av. weight 180 - 200g, Root are almost cylindrical, fine textured flesh of orange colour with self coloured core Mature 110-120 days after sowing

Hybrid - MANASA

Vigorous dark green leaves uniform root, root is 22-24cms length, 3.4-4.5cms dia & Av. weight 200 gms, root are almost cylindrical, fine textured flesh of orange with self coloured core, mature 100-110 days after sowing

ALANAKR

Vigorous, creeper variety, Pods are green, medium long, Pods length 26 - 28 cms, pods wt. 9 gms Seed colour dark brown, First picking starts 45-50 days

VICTORY

Vigorous, Creeper Variety, Pods Are Green, Medium Long, Pods Length 26 - 28 Cms, Pods Wt: 9 Gms Seed Colour Dark Brown, First Picking Starts 45-50 Days, Disease Free & High Yielding

FI HYBRID - 2136

Plants are vigorous, high yielding, short inter node
Pods are dark green glossy with five ridges
Av. fruits length 9-10cms, Av. weight 9-10gms
First harvest starts from 40 - 45 days

FI HYBRID - SAKSHI

Plants are vigorous, uniform high yielding, short inter node,
Pods are dark green glossy slender five ridges
Av. fruits length 12-13cms, Av. weight 13-10gms
First harvest starts from 42 - 45 days

FI HYBRID - 2137

Plants are vigorous, uniform high yielding, short inter node,
Pods are dark green glossy slender five ridges
Av. fruits length 12-13cms, Av. weight 11-13gms
First harvest starts from 42 - 45 days

FI HYBRID - 2055

Plants are vigorous, uniform high yielding short internode
Fruits are light green five ridge & Av. length 10-12cms
Av. weight 10-12gms shelf life very good, less mucilaginous
first harvest start from 40-45 days after sowing, High tolerance to YVMV

FI HYBRID - 2133

Plants are vigorous, high yielding, short internode, pods are dark green glossy with five ridges
Fruits, pods Av. weight 10-12gms, length 10-12cms, first harvest start from 40-45 days after sowing, less mucilaginous, high tolerance to YVMV

FI HYBRID - 2135

Plants are vigorous, high yielding, short internode, pods are dark green glossy long & slender five ridge fruits
Av. length 10-12cms, Av. weight 12-14gms, less mucilaginous shelf life very good, first harvest start from 40-45 days after sowing, high tolerance to YVMV

FI HYBRID - SHRUTHI

Early maturing, outstanding vigorous & prolific spreading habit, Fruits cylindrical 35-40cms long
First harvest starts from 55 - 60 days

FI HYBRID - DHRONA

Medium maturing, outstanding vigorous & prolific spreading habit (vine) hybrid, Fruits are slightly tapering at the neck gradually increasing its width towards the blossom end, Fruits are 35-40cm Long, Dark green with white Dotted skin, fine pubescence flesh white with tender of soft seeds
First harvest from sowing 55-60 days

FI HYBRID - SHAAN (Dotted)

High yield prolific bearing, vigorous plant, Fruits are round with slightly conical in stalk end, Fruits weighing 225-250gms, the rind is smooth with white specks (dotted), First harvest start from sowing 60 - 65 days

FI HYBRID - 4007

Plants are vigorous sturdy vine, produces, Av. 2-3 fruits are oval round with dark green dots skin
Yellowish orange Av. 7 - 8kgs, Maturity start from 85 - 90 days

FI HYBRID - ARYA

Plants are vigorous sturdy prolific bearing habit plant produces, Av. 3-4 medium large flat round ridges
Yellowish orange Av. 4 - 4.5kgs, Maturity start from 70 - 75 days

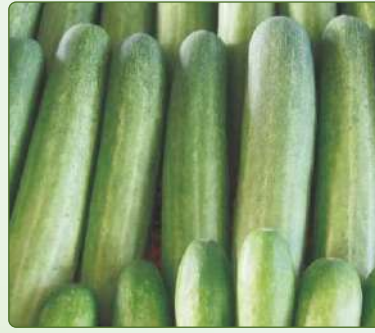

FI HYBRID - GAJA

Plants are creeper, Fruits are dark green, Flattish round surface with prominent ridges, Flesh Saffron color with slightly aromatic, Good adaptability

FI HYBRID - DEVYANI

Plants are vigorous, sturdy vine, Fruits are white colour cylindrical shape, Fruits are 10 - 12cms long dia 3.5- 4cms, First harvest starts from 30 - 40 days

FI HYBRID - VANI

Plants are strong, sturdy vigorous vine, Fruits are elliptical dark green, Av. weight 20 - 22cms, dia 5- 6cms First harvest starts from 40 - 50 days

FI HYBRID - SITHA

Plants are strong vigorous vine, Fruits are uniform cylindrical straight green with light yellow lining Fruits are 16 - 18cms long, dia 4- 4.5cms & Av. weight 200 - 250gms, First harvest starts from 40 - 45 days

FI Hybrid - TANVI

Vigorous, vines are strong sturdy. Elliptical, crisp dark green fruits. Fruits 16-18 cm long 5.7cm diameter. First harvest 48-50 days after sowing. Good adaptability, high yielder.

FI Hybrid - Samber Cucumber - AS - 801

Plant are strong vigorous vine, Fruits are oval with green stripes, Flesh colour white with mild aroma Av. weight 800 - 850g, First harvest start from 65-70 days after sowing, Uniform high yielding

Cucumber -CITY TAXI

Suitable for Green house (exotica)

FI HYBRID - MANDIRA

Early maturing, vigorous vine, good branching continuous fruit setting habit hybrid, Fruits are 45-50cms long uniform green, Fruits Av. weight 250 - 300 gms

FI HYBRID - NAGIN

Early maturing, vigorous continuous fruit bearing habit hybrid, Fruits are 45 - 50cms long uniform dark green, Fruits Av. weight 250 - 300gms First harvest 35 - 40 days

FI HYBRID - NANDINI

Medium maturing, vigorous vine good fruits bearing habit hybrid, fruits are 35 - 40cms long uniform light green colour with strong ridges, fruits Av. weight 200 - 250gms, first harvest 45 - 50 days

FI HYBRID - POOVI

Plants are early maturing vigorous with prolific fruit bearing outstanding, Fruits are uniform dark green Av. fruits length 28-30cms, Av. weight 270-300gms First harvest starts from 50 - 55 days

FI HYBRID - CITRIN

Plants are vigorous well spreading branch good hybrid Fruits are attractive pure white uniform with prominent & non-continuous tubercles, First harvest starts from 50 - 55 days

FI HYBRID - AFA - 309

Plants are vigorous well spreading branch good hybrid Fruits are straight uniform green shining with prominent Non-continuous teeth fruits, Av. weight 200-225gms First harvest starts from 50 - 55 days

FI HYBRID - 4002

Plants are vigorous sturdy bearing habit plant produces, fruits are Av. 2-3 large round, ridges, it's rind colour light green (dots) flesh colour is thick & yellowish orange Av. weight 7-8 kgs maturation start from 85-90 days after transplanting, it's highly tolerant to powdery & downy mildew

FI HYBRID - CAPTAIN

Plants are vigorous sturdy prolific bearing habit plant produces Av. 3-4 medium to large fruit with dark green skin, it's rind colour dark green & flesh colour is thick & deep yellow Av. weight 3-4 kgs, maturation start from 70-75 days after sowing it's highly tolerant to squash mosaic virus, powdery & downy mildew, uniform prolific bearing habit

FI HYBRID - GANESH

Plants are vigorous sturdy bearing habit plant produces, fruits are Av. 2-3 large flat round, ridges, it's rind colour dark green flesh colour is thick & orange Av. weight 5-6 kgs, maturation start form 80 - 85 days after transplanting

FI Hybrid - UTSAV

Bushy type profuse branching, medium height with branching habit. Fruits are oval in shape, green with cream white stripe at bottom. Average fruit weight 50-60gram, First picking starts from 48-50 days after transplanting. Consistent yielder, good adaptability.

FI HYBRID - AS 16

Plants are vigorous. Profusely branching. Fruits are oval round dark purple lustrous. Fruits Avg weight 180-200 gram. First picking start 50-55 days after transplanting. Good adaptability

CHINTU

Vigorous Growth Spreading Hybrid. Fruits are Oblong Purply glossy Medium Firm. Average Fruit Weight 70-80gm, Long 10-12 cm. First Harvest start 60-65 Days, Long 10-12cm. High Yielding. Tolerance to fusarium wilt.

FI Hybrid - CLASSIC ORANGE

It is a outstanding vigorous compact branching Spreading habit hybrid, First flowering 50-55days Flowers are deep orange shiny double petal colour & compact, Average flower weight 12-14gm

FI Hybrid - ASHOKA ORANGE

Medium tall, compact, First flowering 45-50days after TP, Flowers are attractive Orange Average flower weight 16-17gm

FI Hybrid - ASHOKA YELLOW

Plants are very vigorous, profuse branching, First flowering 45-50days after TP, Petals are compact, attractive yellow color, Average flower weight 20-20gm

FI Hybrid - MAX YELLOW

Plants are very compact, First flowering 45-50days after TP, Flowers are yellow Average flower weight 18 - 20gms

FI HYBRID - SWEET - 04

Vigorous strong stalk wide adaptation, Kernel colour yellow dentate, excellent taste, Brix reading 14 - 15% Length 21-23cms, Av. weight 300 - 350gms Maturity from 70 - 80 days

FI HYBRID - ASHOKA 909

Vigorous, dark green leaves, Kernal golden shining dentate. Fruits are Av. 20-22cms large, Av. weight 300-350 gms, Maturity after sowing 110-115days
